KV object lifecycle (business-level abstraction)
EMPTY
no active object
BUILDING
0 -> 256 tokens
SEALED
immutable prefix
SEALED + bound pair
private tails / 3 decode steps
FAILED
zero commit for failed task
QUARANTINE
persistent isolation
REGISTER consumed
generation + 1
successful BUILD consumed
+4 tokens
SEAL at 256
RETIRE
full clear + consume
BIND
RELEASE
drain + clear tails/workspace
flush + consume
successful DECODE consumed
cancel / task error
drain + failure consume
cancel / task error
transport loss
cannot retire / timeout
RECOVER
full clear + consume
whole-chain cold start
new identity / reload
